TITLE: Thioridazine in the treatment of ejaculatio praecox

SOURCE: Ceskoslovenska psychiatrie, no. 2, 1965, 120-123

TOPIC TAGS: drug treatment, genitourinary drug

ABSTRACT:

Thioridazine was administered to 24 patients who have been previously treated unsuccessfully with other drugs; a good effect was observed in 8 patients. In an experiment with a placebo with 15 patients, a substantial improvement in their condition was found as a result of this treatment.

the 7th Annual Psychopharmacological Meeting, Jesenik, 20-23 January 1965SOURCE: Activitas nervosa superior, v. 7, no. 3, 1965, 244-245TOPIC TAGS: biologic reproduction, drug treatment

ABSTRACT: The age of the patients treated ranged from 25 to 30 years; the disorder lasted from 3 to 30 months. 5 complained of EP only, 15 also of erection disorders. 25 mg was administered after dinner for 15 days. Sexual appetite, mood after sexual intercourse, and the duration of coitus were improved. Thioridazine has effect only during the period in which it is administered. [Orig. art. in Eng.]

"Living Conditions and Neuroticism of University Students."

Prague, Ceskoslovenska Psychiatrie, Vol 62, No 4, Aug 66, pp 229 - 236

Abstract /Authors' English summary modified/7: 201 college students in their 3rd year of studies were investigated in 1963; in 1965 188 students in their 5th year of studies were again investigated by the same method. Eysenck's neurosis test (MMQ), Taylor's anxiety test, Knobloch's N5 test, and authors' S test were used. Eating and sleeping habits improved in the 2 years, study exertion decreased, cultural interests widened. Sports activity decreased. Steady dating increased from 25% to 61%, regular sexual life was reported by 15% men and 2% women in 1963, and in 1965 by 73 and 61%. Drinking of coffee and alcohol and smoking increased. Taking of drugs rose from 5 to 22%. Neurosis rose from 6 and 23% to 21% of 1/1 men and 36% of women. 3 Tables, 11 Western, 19 Czech refs.

2733. SEPARATION OF PROTEIN FRACTIONS, AMINO-ACIDS AND SUGAR-LIKE SUBSTANCES IN HUMAN GASTRIC JUICE BY PAPER ELECTROPHORESIS - Dělení bílkovinnych frakci, aminokyselin a láttek cukerné povahy v lidské žaludeční štavě elektroforesem na papíře - Boučka J. and Veselý K. T. Int. Odd. OUNZ Hodonín; Ust. Lab., OUNZ, Hodonín - CSL, GASTROENT. VYZ. 1958, 12/5 (379-385) Graphs 2

Gastric juice was filtered and dialysed in a 'cellophane' bag against a 50-60% solution of gum arabic at 2-4°C. During dialysis 5-10 ml. of the juice were concentrated to 0.2-0.5 ml. After paper electrophoresis of the concentrate in barbital buffer pH 8.6, 4-8 protein components were identified. Heyrovský - Prague.

2146. STAINING OF PROTEINS AND GLYCOPROTEINS AND ESTIMATION OF POLAROGRAPHIC ACTIVITY OF ELUATES IN THE ELECTROPHOREOGRAM OF HUMAN GASTRIC JUICE - Barvenf blikovin a glykoproteid a určení polarografické aktivity eluatů v elektroforeogramu lidské žaludeční slavy - Bouda J. and Veselý K. T. Int. Odd. a Úst. Lab. OÚNZ, Hodonín - CSL GASTROENT. VYZ. 1959, 13/6 (421-425) Graphs 3

The gastric juice is concentrated by dialysis against 50% gum arabic and submitted to paper electrophoresis in barbital buffer pH 8.6 for 16 hr. on Whatman I paper at 150 V. The strips are stained with bromphenol blue, with amido-black 10B and with periodic acid-Schiff, and evaluated by direct photometry. The dry strips are eluted with 0.9% NaCl, Brdička's solution is added to the eluates and the polarographic curve is recorded. From the starting point to the anode the follow-

2144

ing components separated: M<sub>4</sub>, M<sub>3</sub> (dissolved mucoproteose), M<sub>2</sub> (dissolved mucin), M<sub>1</sub> (gland-mucin) and P (pepsin). On the cathodic side unidentified fractions X, Y, Z were sometimes found. Fractions M<sub>1</sub> and M<sub>2</sub> stain intensely with amido-black 10B, whereas the periodic acid-Schiff reagent gives the most intense staining in the component M<sub>3</sub>. All the components showed polarographic activity; the most active were M<sub>3</sub> and M<sub>2</sub>.

TITLE: Selective extinction of orienting reflex to complex acoustic and multimodal stimuli

SOURCE: Zhurnal vysshey nervnoy deyatel'nosti, V. 14, no. 4, 1964,  
608-617

TOPIC TAGS: orienting reflex, acoustic stimulation, multimodal stimulation, orienting response, nervous model, auditory cortex, acoustic analyser

ABSTRACT: A study was made of the orienting response of dogs to complex stimuli after circular cutting or ablation of the auditory cortex. Electrodes were implanted in the auditory and motor cortex, the reticular system of the midbrain, and the thalamus. Respiration was recorded simultaneously with the obtaining of an electromyogram of the ear. The ability to discriminate complex stimuli was estimated by the appearance of an orienting response when a component of

Card 1/3

ACCESSION NR: AP4044433

the complex was changed (or omitted), after preliminary extinction of the reflex of orientation to the complex stimulus. It was found that the "nervous model of the stimulus" involves integration of complex stimuli addressed to one or several analysers. This sensory integration is not precluded by circular cutting of the auditory cortex. Ablation of the main part of the auditory cortex disturbs the discrimination of acoustic stimuli which differ by the sequence of components. It is assumed that the "nucleus" of the cortical part of the acoustic analyser is responsible for the differentiation of acoustic complexes and that the transcortical connections are not involved in the formation of multimodal complexes. TITLE: Synthesis and polymerization<sup>14.55</sup> of polyestermethacrylates of terephthalic and furane-2,5-dicarboxylic acid

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 1, 1965, 31-34

TOPIC TAGS: organic synthetic process, polymerization, acrylic acid, terephthalic acid, dicarboxylic acid

ABSTRACT: [English article] The polyestermethacrylates investigated by A. A. Berlin et al. (Vysokomolekul. soyedineniva, 1, 1959, 951) were obtained primarily by means of the condensational telomerization of phthalic anhydride or aliphatic dicarboxylic acids with multivalence alcohols and methacrylic acid. As a number of experiments have shown, this method is inapplicable to the production of polyestermethacrylates from terephthalic and furane-2,5-dicarboxylic acid in a toluene medium. Attempts were therefore made to obtain and methacrylate terephthalic and furandicarboxylic hydroxyl-containing oligoesters (HOE). The authors describe in details two methods which they used for the synthesis of HOE and the subsequent polyestermethacrylate production by treating HOE with acid chloride of methacrylic acid in a

TITLE: Polymerization kinetics in blocks of polyestermethacrylates based on  $\beta$ -terephthalic and furane-2, 5-dicarboxylic acid

SOURCE: Bulgarska akademiya na naukite. Doklady, v. 18, no. 2, 1965, 121-124

TOPIC TAGS: methacrylate plastic, polyester plastic, carboxylic acid, polymerization, polymerization kinetics

ABSTRACT:

G. V. Korolev et al. (see, e.g., *Vysokomol. soviedineniya*, 4, 1962, No 11, 1663) have discovered a number of important laws of steric polymerization while investigating the polyestermethacrylates (PEM) synthesized by them by means of the thermometric method. A further development of notions about the relation between the structure of the polymerizing polyfunctional oligoesters and their responsiveness and properties makes it necessary to study the character of steric polymerization with new PEM types and other oligomers. In this connection the authors investigated the polymerization kinetics of PEM of terephthalic and furane-2,5-dicarboxylic acid (M. Mihailov, H. Boudevska, Compt. rend. Acad. bulg. Sci., 18, No 1, 1965)

Card 1/2

L 00163-66

synthesized earlier. The thermometric method which is most suitable for  
steric polymerization was used for this purpose (G. V. Korolev et. al.,  
*Vysokomol. soyedineniya*, 1, 1959, No 1, 1396). Results are presented in the  
form of detailed graphs. Orig. art. has: 4 graphs.

A report is presented of the treatment of 250 hypertensives (early stages) with either baths, baths plus serpasil, or baths plus serpasil plus apresoline. It was determined that combined treatment is better than baths alone. This regime is recommended even for short 21-day courses. (XVIII, 6, 17)
